#### **Bellcomb Expands Footprint with Addition of Second Facility**

Minneapolis MN September 13, 2010- Bellcomb Technologies, a leading manufacturer of innovative lightweight panels and panel system solutions has expanded, locally, with the addition of a second production facility located in Golden Valley Minnesota, five mile from Bellcomb's headquarters and primary manufacturing facility.

The second facility compliments Bellcomb's current panel manufacturing capacity of 40,000,000 square feet, by bringing an additional 125,000 square feet of manufacturing space to the company's portfolio.

"I am excited about this acquisition. We feel so fortunate that our growth has been strong enough during these difficult economic times to support expansion of our capabilities in this way. This is a key purchase and will help us expand our Strata Panel™ (stone), plastic core lines and large panel production as well as provide room for future growth", states David Hartwell, President.

Bellcomb Technologies provides both custom designs lightweight panel solutions as well as market focused solutions ranging from barricade to cleanroom systems. The company continues to drive toward excellence for its customers through product development, new market solutions and superior customer care.
